

Overlay Services Fact Sheet

What is an Overlay Service?

The New Payments Platform supports 'overlay' payment services that utilise the Basic Infrastructure of the Platform. An Overlay Service is a tailored, value adding payment service or payment-related service owned and operated by a third party, which can be deployed on the Basic Infrastructure to deliver value to a specific group of subscribers and end users.

What is an Overlay Service Provider responsible for?

An Overlay Service Provider has responsibility for determining:

- specifications for their proposed service such as the content of payment messages, posting standards and customer SLAs
- branding (if any) of the service
- ongoing governance of the service
- commercial arrangements with subscribers¹⁾ to the service

NPP Australia Ltd (NPPA) has defined a range of technical and operational requirements related to the clearing and settlement of payments via the New Payments Platform. An Overlay Service Provider must adhere to NPPA's Regulations and Procedures as they relate to Overlay Services.

What is the criteria for becoming an Overlay Service Provider?

To be able to provide an Overlay Service on the New Payments Platform, an organisation must be authorised by NPPA as an Overlay Service Provider. An applicant needs to demonstrate that they can meet the following eligibility criteria:

- Be a body corporate
- Have the requisite business expertise to be able to offer the proposed service and have a comprehensive business plan for the proposed service
- Be financially solvent

Key questions for a potential Overlay Service Provider to consider

It may be useful to consider the following questions if you are contemplating becoming an Overlay Service Provider:

- What is the customer experience that you are looking to deliver?
- Which NPP message types do you intend to use? Are any new message types required for your proposed service which are not currently supported by the NPP's Basic Infrastructure?
- How are the message flows intended to work?
- What extra data usage requirements (if any) will you require in your messages? What do you expect that subscribers will need to do with this data as part of your service (i.e. present it to

customers via specific channels, manipulate it and/or validate it and/or store or forward this data)?

- What authentication, subscription, or know-your-customer requirements are likely to be involved in the sign-up and ongoing use of your service?
- What will subscribers have to do to support your proposed service? What implications will your service have on the back office of subscribers?
- How are you planning to manage ongoing governance of the service?
- What commercial arrangements are you looking to put in place with the subscribers to your service?

Application checklist

The following documentation is required to be submitted with the application form for becoming an Overlay Service Provider:

- ✓ Certificate of Incorporation
- ✓ Company overview
- ✓ Financial records (or if not available, evidence of funding)
- ✓ Business plan for proposed service including:
